CSS Lab – Breaking Bad (2025)

A very popular show for five seasons starting in 2008 was called Breaking Bad. The opening title screen had a very classic chemistry logo where some letters were replaced with the chemistry symbols.

For this assignment, you are to write your full name with the Heart Breaking Bad font (<https://www.dafont.com/heart-breaking-bad.font>) using HTML and CSS. Create an HTML file that loads an external style sheet called bad.css. In bad.css using the @font-face CSS to load and link the raw font file. Create the proper CSS code to implement the loading the font to be used in HTML. Finally write your full name in the HTML file and have the HTML file reference the Heart Breaking Bad font in your bad.css file.

You should have the following directory structure:

```
CSS Lab – Breaking Bad
  index-.html (this is where you will write your HTML)
  font
    put all your raw font file(s) from the website here
  css
    bad.css
```

One best practice is to use the WOFF 2.0 web font format for all your web fonts. Convert your Heart Breaking Bad font (currently .otf – open type font) to WOFF 2.0. The website will do this for you easily: <https://cloudconvert.com/otf-to-woff2>. Now update the @font-face to prefer the WOFF 2.0 font and fallback to the .otf font if the browser does not support the woff2 specification.

Take a screenshot of your website. Call the file name-proof.{jpg|png}. Upload your CSS Lab folder to GitHub. Zip your CSS Lab – Breaking Bad folder. Upload the zip file and your name-proof file to D2L.
