## HTML Lab Extra Credit - Superbowl (2025)

This is an extra credit assignment and is not required to be completed. But completing this assignment correctly will yield potential benefits.

Task: Create a W3C valid HTML5 webpage. You are going to pick the winner of the Superbowl (either the Chiefs or the Eagles) and create a webpage based on the team's schedule and path to the Superbowl.

- You are to create a h1 tag the shows your team's name.
- You are to create a table that lists all the games played along with the results for the chosen team.
- You will also include the Superbowl game and guess the final score. (Guessing the final score correctly is not part of the assignment). The student that guesses the final score the closest will win a different reward later in the semester.
- You will use semantic HTML and include `<header>`, `<main>`, `<footer>` and `<section>` tags where needed. At least 1 of every tag is required for credit. You might have to create additional content inside the tags.

By submitting this assignment correctly, you will make up for 1 missing or 1 assignment where you didn't get full credit. The assignments that are valid or from the first Git Lab up through all the CSS Labs. This will not make up for assignments after JavaScript was started. This will also not make up for an zyBooks material missed. This will make up for in class labs missed or full credit not earned: Currently (GitLab, HTML Lab 1,2,3,4, HTML Lab – Your Song, HTML Lab – INTE Schedule) and future CSS Labs.

You have a choice of picking the team you want to work on to complete this assignment. If you pick the team that wins the Superbowl, you will win double the reward. So, if you did the assignment correctly, you would have a combination of 2 missing/low point assignments replaced with full credit.

The assignment is due on Sunday, Feb 9 at 6:30pm.
